

OETIKER STEPLESS EAR CLAMPS

Universally used where a minimal protrusion and a small clamping range are essential. The clamps are a one-time use, not reusable. **Sold in Pack/10.**

Features:

- Innovative, economical, high-quality clamp
- Fast, simple and safe installation
- Deburred edges reduce the risk of damage to the part being clamped
- Made of 194 Stainless Steel, Material no. 1.4310 / UNS S30100
- Designed to hold tight but not damage soft and hard rubber and plastic applications
- The Clamp is very low profile and creates a spring effect which allows for thermal expansion

OETIKER STEPLESS LOW PROFILE 192 CLAMPS

Designed to be used where a dimensional variations in the parts being clamped and when applying high radial forces are needed. These clamps are designed to be reusable. **Sold in Pack/10**

Features:

- Low installed height – minimum space requirement
- Reusable, can be installed axially or radially
- Minimal imbalance on rotating parts
- Stepless® Design – no steps or gaps on inner circumference
- Specially formed strip edges reduce the risk of damage to the part being clamped
- Visual check that clamp is closed
- With Type 1 Tolerance Compensation
- Tolerance-compensation element provides a degree of compensation for the manufacturing tolerances of parts being joined
- 168 Stainless Steel, Material no. 1.4301 / UNS S30400
